

Mac OS X 10.4 ve üzeri sürümler için OpenVPN bağlantı kılavuzu

1) Aşağıdaki adresten boun.ovpn adlı profil dosyasını indirip kaydedin;

<http://www.cc.boun.edu.tr/boun.ovpn>

2) Tunnelblick, OS X işletim sistemlerinde çalışan, açık kaynak kodlu bir OpenVPN bağlantı yazılımıdır.

Şu adresten kurulum dosyasını indirin;

<https://code.google.com/p/tunnelblick/>

[https://code.google.com/p/tunnelblick/wiki/DownloadsEntry#Tunnelblick Stable Release](https://code.google.com/p/tunnelblick/wiki/DownloadsEntry#Tunnelblick_Stable_Release)

Tunnelblick Stable Release

(A stable release is a version that has been tested as thoroughly as possible and is as reliable as we can make it. It usually does not have all the new features of a beta release, but may be more reliable.)

For use on OS X 10.4 - 10.8 ("Tiger", "Leopard", "Snow Leopard", "Lion", and "Mountain Lion"), Intel or PowerPC, 32- or 64-bit.

DO NOT use on OS X 10.9 ("Mavericks") -- use the latest [Beta Release](#).

[Tunnelblick 3.3](#) [sourceforge.net] (build 3518) released 2013-07-22 [Release Notes](#) [What's New in 3.3](#)

You **DO NOT** need to **uninstall** previous versions of Tunnelblick; just install this one.

NOTE: This version will refuse to install or launch on a computer that has ever had a "**Deployed**" version installed unless that version has been completely **uninstalled**. Uninstalling will delete all Tunnelblick VPNs from your system.

To update a "**Deployed**" version, you must obtain a new version from the person or organization that provided you with your original "**Deployed**" version. The Tunnelblick project does **not** provide "**Deployed**" versions.

The latest version that may be used as a "Deployed" version is 3.3beta21b (Unsigned). It may be found on the [Security Risk Downloads](#) page.

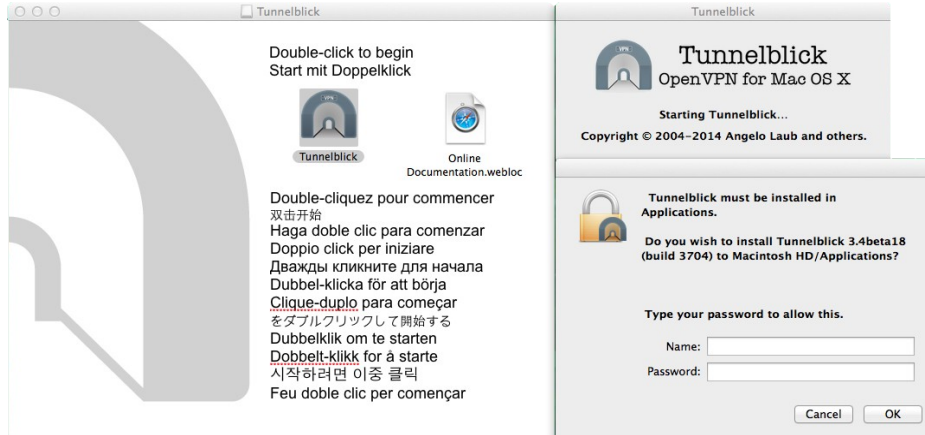

Tunnelblick Beta Release

(A beta release is a version that has been tested internally and is ready for testing by the wider community. It usually has new features that are subject to change and need testing, and may have bugs or limitations.)

For use on OS X 10.4 - 10.9 ("Tiger", "Leopard", "Snow Leopard", "Lion", "Mountain Lion", and "Mavericks"), Intel or PowerPC, 32- or 64-bit.

[Tunnelblick 3.4beta18](#) [sourceforge.net] (build 3704) released 2013-12-18 [Release Notes](#)

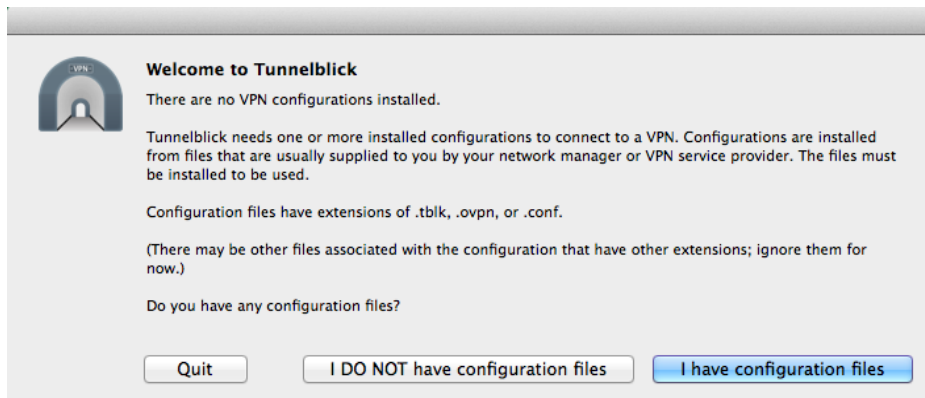

3) Tunnelblick yazılımını kurun;

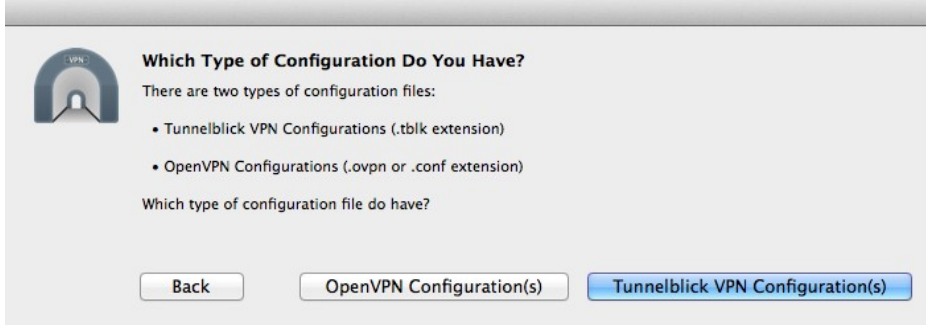

ve çalıştırın;

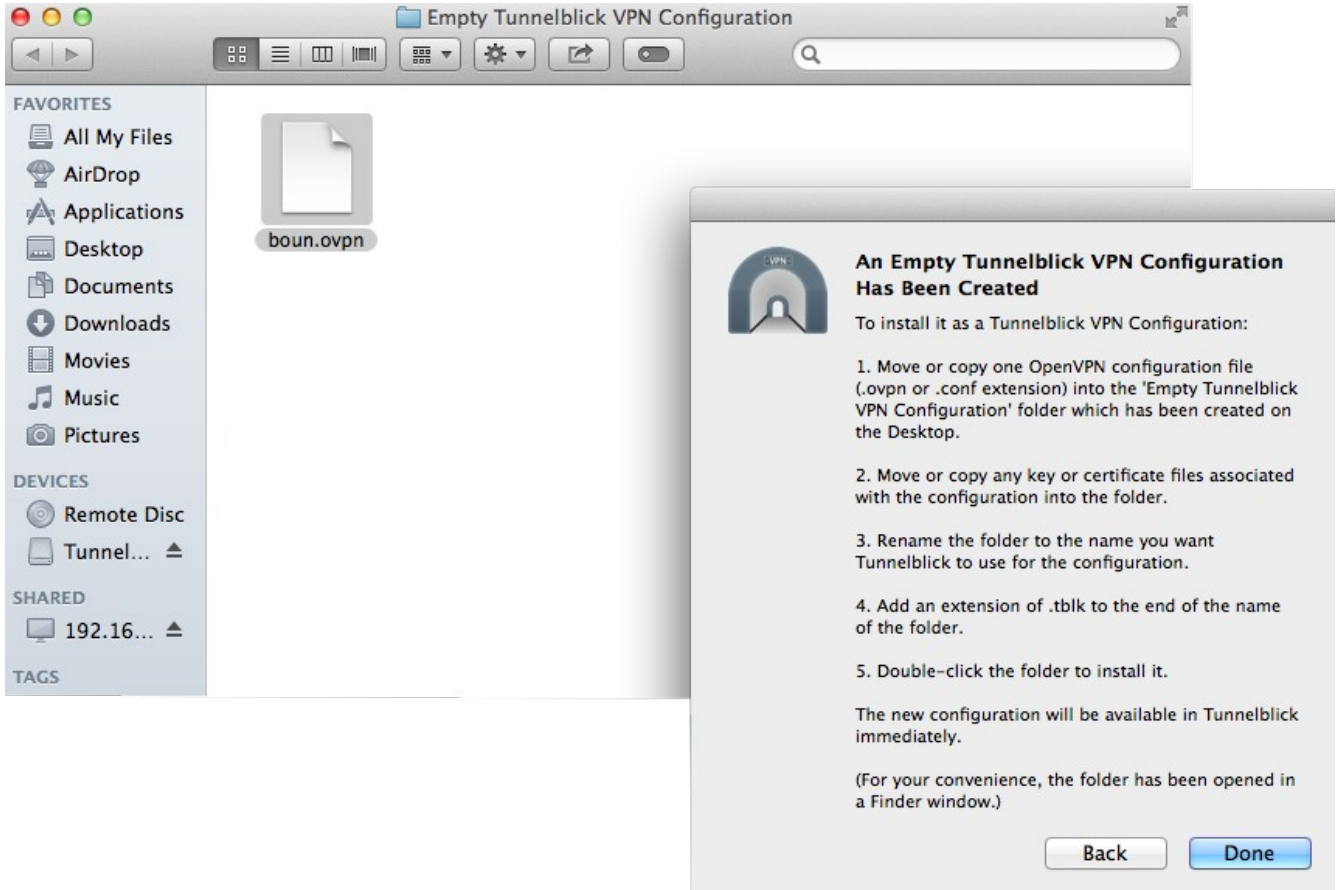

4) Tunnelblick yapılandırma dosyalarınız olup olmadığını sorduğunda “I have configuration files” seçeneğini tercih edin;

Bir sonraki diyalogda “OpenVPN Configuration(s)” seçeneğiyle ilerleyin;

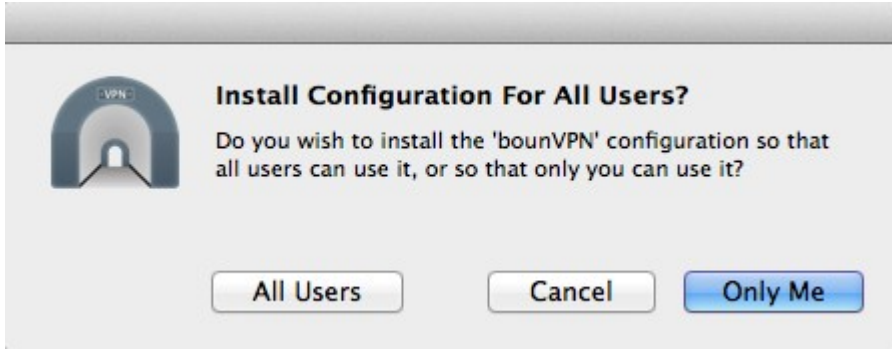

Birinci adımda indirmiş olduğunuz boun.ovpn profil dosyasını Tunnelblick'in sizin için oluşturduğu yeni klasöre taşıyın;

ve “Empty Tunnelblick VPN Configuration” olan klasör adını, sonu “.tblk” olacak şekilde yeniden adlandırın;

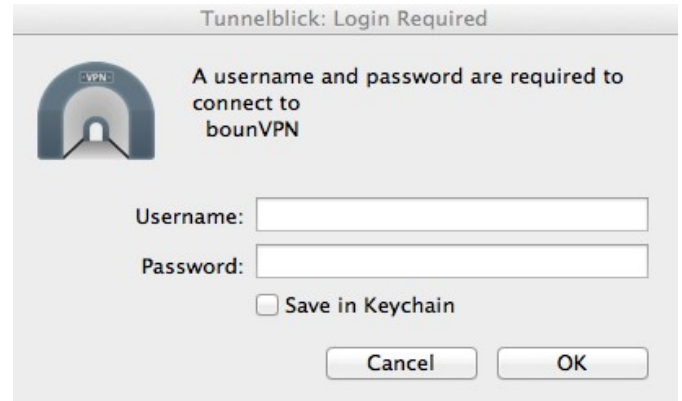

Yeniden adlandırdığınız dosyayı çalıştırarak kurulumu tamamlayın;

6) Tunnelblick yazılımını çalıştırın ve aşağıda gösterildiği gibi bağlantıyı başlatın;

7) boun uzantılı e-posta adresinizin @ sembolünden önce gelen kısmını "Username" parolanızı da "Password" alanlarına girip OK'i seçtiğinizde bağlantı kurulacaktır.

8) Bağlantıyı kesmek için;
